

Welder training

You learn from our skills

In our training centre or at your site, your welders receive individual training until they are ready for the examination. Afterwards, our accredited test centre for welders can carry out the examination according to the relevant regulations.

Welder training

In our welder training your welders receive individual training until they are ready for the examination. Welding training is practice-oriented, as our welding instructors are welders with many years of experience and are used for demanding welding work at home and abroad. The duration of the training is flexible and depends on the skills and previous knowledge of the trainees.

With the aim of improving your welding results, we offer individual welding courses in our training centre in Winterthur or at your premises. Practical working conditions such as cramped rooms or limited accessibility are simulated in our own training centre.

Training in small groups

Training place

Training workshop

In the case of complex welding work, we will be happy to train your welders on the work pieces you have brought with you, together with the welding machine used in your company.

Qualified for the training of the following welding processes

- 111 (E)
- 141 (TIG)
- 142 (TIG without additive)
- 131 (MIG)
- 135/136/138 (MAG)
- 311 (G)
- 114 (without inert gas)
- Soldering
- Other processes on request

Welding services, welding engineering

- Welding and test monitoring
- Creation of welding instructions (WPS)
- Creation of welding sequence plans
- Creation of test instructions
- Handling of procedural audits
- Consultation on designs and welding-compatible construction

Partner

- Highly qualified specialists from Qualitech AG are our partners for:
 - Manufacturing engineering, total solutions
 - test and measurement
 - Material and surface technology
 - Corrosion and corrosion protection
 - Friction and wear issues
 - Damage and material analysis
